

How to install miniwebserver for Tools for Autodarts and integrate Caller-Voices or sounds.

DOWNLOAD MINIWEBSERVER HERE:

<https://sourceforge.net/projects/miniweb/>

After Download -> Extract ZIP-File and you get this:

 miniweb	09.03.2013 15:27	Dateiordner	
---	------------------	-------------	--

Next you have to create ne archive in htdocs:

 htdocs	27.12.2012 17:28	Dateiordner	
 miniweb	27.02.2013 17:48	Anwendung	208 KB

Delete everything here:

(C:) > Benutzer > > Downloads > miniweb-win32-20130309(1) > miniweb > htdocs				
Name	Änderungsdatum	Typ	Größe	
 default	13.08.2009 15:21	Kaskadierendes St...	1 KB	
 favicon	13.08.2009 15:21	ICO-Datei	3 KB	
 index	06.04.2012 07:17	Firefox HTML Doc...	3 KB	
 logo	13.08.2009 15:21	PNG-Datei	3 KB	
 upload	27.12.2012 17:39	Firefox HTML Doc...	1 KB	
 uploaded	27.12.2012 17:28	Firefox HTML Doc...	1 KB	

DEL / ENTF (after that this archive has no files anymore!!!)

Now create new archives for example :

 Caller Bayerisch	04.08.2024 18:46	Dateiordner	
 Caller Male eng	04.08.2024 18:47	Dateiordner	
 Caller PC Automatic	04.08.2024 18:47	Dateiordner	

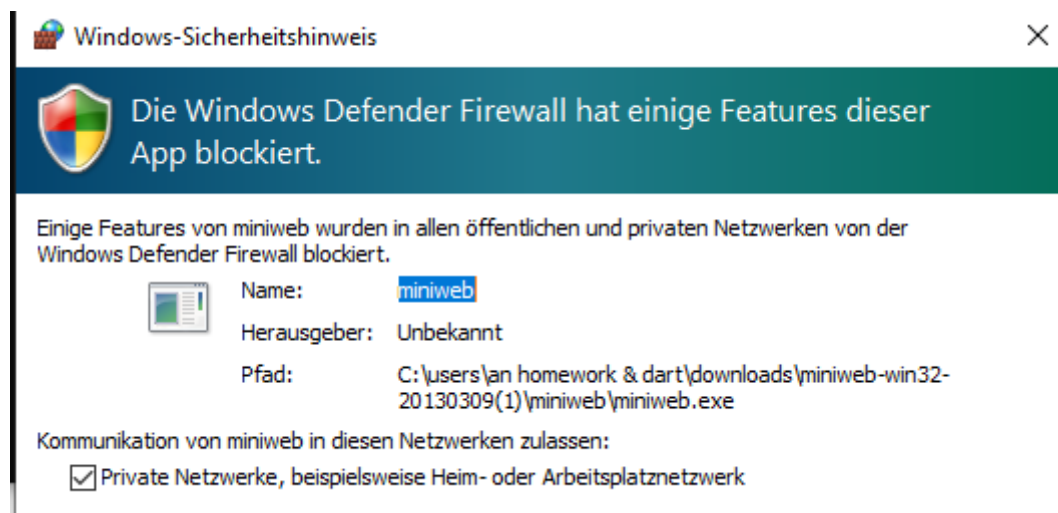

In each archive you have to copy your mp3-files (Caller-Files)

- 0
- 1
- 2
- 3
- 4

After that you have to install Miniweb!!

htdocs	04.08.2024 18:47	Dateiordner	
miniweb	27.02.2013 17:48	Anwendung	208 KB

Installing directly on the client you use autodarts or in my case on the pc where the AD-Browserscreen is working!

Accept private network!

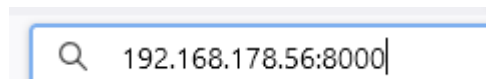

After that you get this following screen:

```
C:\Users\AN HOMEWORK & DART\Downloads\miniweb-win32-20130309(1)\miniweb\miniweb.exe
MiniWeb (build 300, built on Feb 28 2013)
(C)2005-2013 Written by Stanley Huang <stanleyhuangyc@gmail.com>

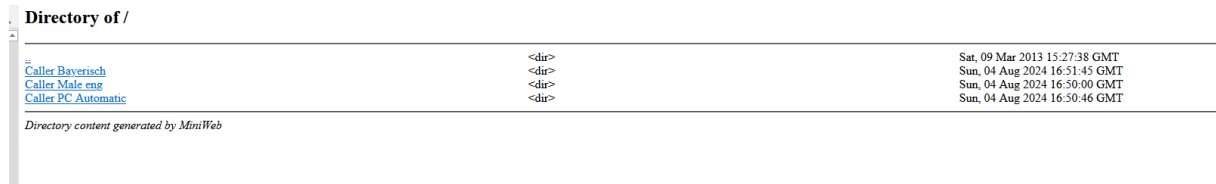

Host: 192.168.178.56:8000
Web root: C:\Users\AN HOMEWORK & DART\Downloads\miniweb-win32-20130309(1)\miniweb\htdocs
Max clients (per IP): 32 (16)
URL handlers: 2
Dir listing enabled
```

NOTE THE IP – Adress! This is the important file for you! In my case 192.168.178.56:8000

Type it in to the browser now!

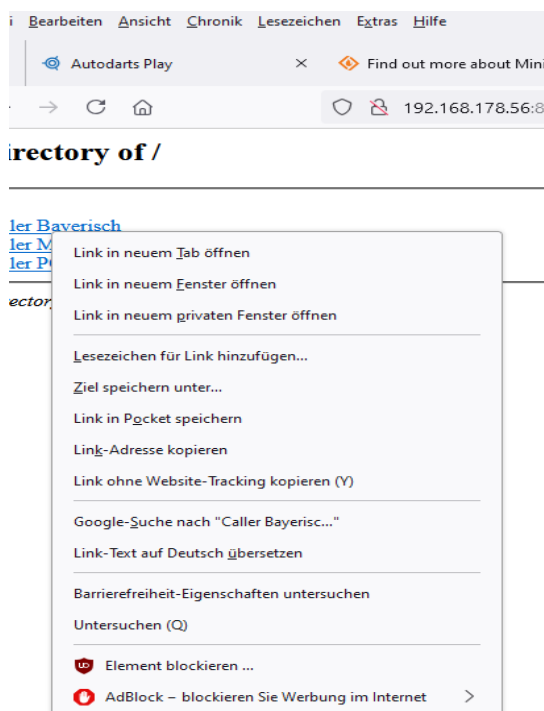

After that you get this screen:

In my example i wanna integrate the Caller Bayerisch now!

I copy and paste the link adress (right mouse button on the Caller Bayerisch):

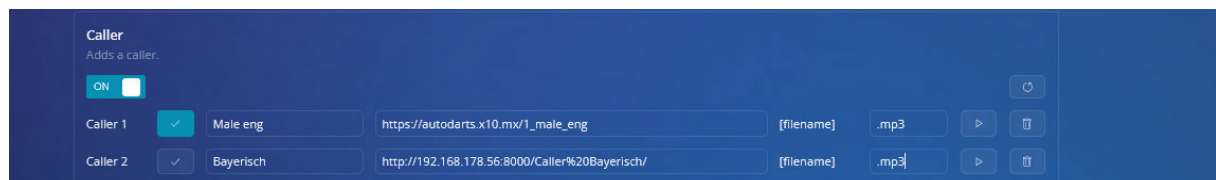

NOTE!

Mini web server can start automatically under Windows:

- Press Windows key + R
- Enter "shell:startup" in a small window
- in the now opened folder -> right click -> New -> Shortcut -> Search -> enter/search path to miniweb.exe.
- Click "Next".
- Click "Finish".

If the caller is running on the same PC, the address to the mini web server is: localhost:8000

The last thing i have to do is „paste“ the Adress link in to the Tools for Autodarts (Caller) ->

Thats all!!! This works for every sound file you wanna integrate. Like Triple, Start or Finish sounds!

ENJOY
